

CerarMix™ Housing Structure Benefits

Superior Quality

Energy Efficient

The structure's skin is combined and integrated with steel stud design.

Each structural component is built to comply with precise location and structural specifications.

State-of-the-art fabrication facilities integrate best practices in design and workflow

The structural composite is combined with a bio-fiber core and heat reflective media.

The structures deliver unparalleled strength.

Excellent energy ratings are built into the structure from the ground up.

Saves Time

Flexibility

Little to no structural modification required once on site.

Reduced labor and material cost to complete the setup and installation.

Set-up costs kept to a minimum because of quality engineering.

Ideal for both temporary and permanent applications.

Structures can be designed to meet the requirements for any application.

Structures are shipped complete with fittings, materials, attachments and tools

Saves Money

Self-Contained

Fully Customizable Features

- ✓ Custom Colors
- ✓ Finishes can be made to resemble stone, slate, brick, concrete, metal, wood, and other surfaces
